Analysis

This namespace organizes information for people doing analysis on model output with a focus on storm-resolving ICON simulations (Sapphire). It documents where output from model simulations that are of more general interest can be found. It also explains and provides basic analysis scripts, based on CDO, python and Jupyter notebooks, to analyze model output. It does not require any previous knowledge. Potpourri is a collection of older websites on the topic of model output analysis, where part of the information may be deprecated.
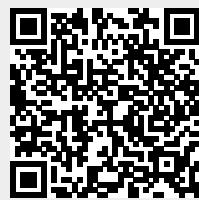

Search

Search only in the *Analysis* namespace.

Contents of this Namespace:

- Available simulations
- Model Output Analysis
- Potpourri
