

E. Pre-Processing

HD input

Instruction for generating the necessary bc_hd_land (hdpara) file (and for high resolutions the ic_hd_land/hdstart) files necessary to run coupled ICON simulations with full river routing are given in the [ICON HD Parameter Generation Instructions](#) .

Grid generation and other input files

The grid generation and other necessary steps to generate required input data (initial data, aerosol, ozone and land data) for the ICON ESM and ICON-A(tmosphere) are compiled in the [ICON input guide](#).
