

List of IDs

People are asked to fill in their abbreviations for the naming convention they are asked to use in their experiments. New entries have to take care not to use an already existing abbreviation, even of former, not active, members. Abbreviations should result from the experimenters name. You have to add your department/group.

Beware of using "sst" or "ice" as ID. These names might trigger a bug in old ECHAM run scripts and cause data loss!
